

Great call. This is *exactly* where strong expo teams separate themselves from “cool but impossible” projects.

I'll do this in a **judge-friendly, engineering-realistic way** — not startup hype.

MVP vs Future Scope (Smart Education Platform – VTU)

MVP GOAL (What you will actually build & demo)

Goal:

Prove that **AI can intelligently organize VTU study material and help a student prepare better for exams**, using **real documents + PYQs**, in a controlled, reliable way.

Judges care about:

- Feasibility ✓
 - Clear problem–solution ✓
 - Working demo ✓
 - VTU relevance ✓
-

MVP FEATURES (Must-have for Expo)

1. User Onboarding (Core Personalization)

IN MVP

- Login / Signup
- Academic info:
 - o College
 - o Course
 - o Semester

- o Subjects (VTU only)

WHY MVP:

Everything else depends on subject-wise structure.

2. Document Upload + AI Organization

IN MVP

- Upload PDFs / images / text
- AI:
 - o Renames files cleanly
 - o Adds title & description
 - o Classifies as:
 - Notes
 - PYQs
 - Important Questions
- Stores under:
Subject → Module → Category

WHY MVP:

This is your **core Smart Education innovation**.

3. Study Mode (Limited but Solid)

IN MVP

- Select documents
- Start a **study session**
- AI can:
 - o Summarize content
 - o Generate VTU-style Q&A (2M / 8M / 10M)

- Chatbot can access **only selected documents**
- @document referencing

WHY MVP:

Shows controlled AI (no hallucination).

4. Exam Mode – PYQ Intelligence (Basic)

IN MVP

- Upload PYQs
- AI:
 - o Classifies questions by module
 - o Identifies repeated questions
 - o Marks **important questions**
- VTU marking scheme answers

WHY MVP:

Direct exam value = judges love this.

5. Solving AI (Constrained)

IN MVP

- Upload a question
- AI answers in:
 - o 2M / 8M / 10M VTU format
- Uses **only uploaded docs**

WHY MVP:

Demonstrates accuracy + syllabus alignment.

6. Simple Library View

IN MVP

- Catalog of uploaded documents
 - Search by:
 - o Subject
 - o Type
 - Download own documents
-

7. Tech Stack Demo

IN MVP

- React + TypeScript frontend
- Supabase auth
- External storage (Cloudflare R2)
- AI via **Kimi K 2.5 / OpenRouter**

Judges don't need full infra — just proof.

NOT IN MVP (Future Scope Only)

These are **vision features**, not demo features.

Future Scope (Post-Expo / Phase 2)

Advanced AI & Automation

- Lecture audio transcription + task extraction
- Auto task scheduling
- Live editable AI document

- Voice-based answering
 - OCR-based written answer evaluation
-

Exam Intelligence (Advanced)

- Full IA & semester tracker
 - Question prediction with probability scores
 - Paper grading AI
 - Performance analytics dashboards
-

Content Expansion

- YouTube video summarization
 - Podcast explanations (TTS)
 - Slides & mind maps auto-generation
-

Platform & Scale

- PWA + mobile app
 - Multi-university support
 - Collaborative study groups
 - Faculty dashboards
-

Monetization Expansion

- Credit-based usage system
 - Premium API bundles
 - Institutional licenses
-

How You Present This to Judges

Say this line (memorize it):

“For PROJECT EXPO, we are demonstrating a **working MVP** focused on VTU students that intelligently organizes study materials and uses AI for exam-oriented preparation. Advanced automation, analytics, and multimodal features are planned as future scope.”

This shows:

- You're **practical**
 - You understand **engineering constraints**
 - You're not overclaiming
-

MVP FEATURE COUNT (Judge-safe)

- **7–8 strong features**
- Fully demo-able
- Clean problem → solution

If you want, next I can:

- Reduce MVP to a **1-page architecture diagram**
- Write **MVP-based abstract**
- Map MVP → **Social Impact / Best Innovation award**

Just say the word 🔥
